## Describe any changes other than editing from proposed to adopted version:

- 1. Section 51-52-0403, Table 403.3: Based on testimony received, the outdoor airflow rate under "Private dwellings, single and multiple", "Living areas" was changed to reference the whole house ventilation requirements in Tables 403.8.1 and 403.8.5.1 and coordinate with that section.
- 2. Section 51-52-0403, Section 403.8.2: The control requirements in item 5.5 of this section were adjusted to coordinate with the requirements in Section 403.8.5.1 to specify operation at a minimum of one out of every four hours.
- 3. Section 51-52-0403, Section 403.8.5.2: The exception was moved from Item 6 to Item 7 of this section. Testimony received indicated the exception was appearing in the wrong location.
- 4. Section 51-52-0403, Section 928.1: It was pointed out at the public hearing that Items 4 and 5 of this section had been erroneously combined. The list has been corrected.
- 5. Section 51-52-1000, Chapter 10: Based on concerns voiced during public testimony, an informational note was added to the beginning of Chapter 10 to clarify that boilers and pressure vessels must meet Labor and Industry regulations. In addition, Exception 7 of 1001.1 was modified to indicate that, in addition to other state and federal requirements, any local inspection programs would take precedence over this code.
- 6. Under the proposed rule, amendments to the 2012 International Fuel Gas Code were erroneously placed into the WAC sections for the National Fuel Gas Code and LP Gas Code. WAC 51-52,22004 and -22006 were renumbered to be included in the International Fuel Gas Code section, as 51-52-21401 and -21601.
